

Product Release

Aztech 3G Router for Mobile Broadband Sharing Available for Increased 3G / HSDPA Users

- Save costs as you share from one 3G mobile broadband
- A quick and secure substitute in SOHOs that do not have a fixed cable or DSL service available.
- Simple and fast – plug and play

Malaysia - Aztech, the leading powerline and wireless networking brand, now offers Internet users an instantaneous wireless solution they can share wherever they are.

The new **Aztech HW831 3G Mobile Broadband 802.11g Router** offers users a portable high-speed wireless hotspot solution for tradeshows, conferences and business meetings outside the office.

No fixed cable or DSL line is needed for extra convenience for the user – you simply dock your existing 3G USB modem into HW831 to create your own secure wireless hotspot at 802.11g (54Mbps) that you can share with colleagues, family or friends. Watch your single USB modem convert into a multiple-user ready wireless router, helping you to save costs on broadband Internet connection, and enabling you to enjoy Internet on the go.

About 3G Mobile Broadband

3G is an emerging widespread mobile broadband technology as more people demand mobile Internet to be constantly “connected” for minimal disruption to their work and personal lives. Mobile broadband enables users to read and respond to their emails anywhere they are with ease, check market updates, receive news, and get directions to their next destination.

Key Features

- Fast 3G speed up to 7.2Mbps and wireless 802.11g speed up to 54Mbps
- Multiple users to share from one 3G mobile broadband
- Dual usage Wireless Access Point to your Streamyx
- 1 x Ethernet port available for connecting your desktop to your new wireless hotspot

Security Features

- 64/128-bit WEP for security
- SPI Firewall
- VPN Pass-Through
